Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Adomaitis et al. US 6,821,910, in view of Kilpela et al. US 6,820,570.

Adomaitis et al. discloses a method and apparatus for forming a conformal film including a gas inlet for introducing a gas into an expansion volume, and flowing the gas through a diffuser plate, the diffuser plate having a protrusion (24) located opposite the gas inlet, the protrusion operable to reduce turbulence in the volume (see figs. 3A-5 and related text).

Adomaitis et al. does teach using the method or apparatus for ALD.

Kilpela et al. discloses the need to form conformal ALD films and the desire to better control the gas flow during ALD process (see figs. 2-3B and related text).

Therefore it would be obvious to one of ordinary skill in the art to use the method and apparatus of Adomaitis et al. to form a conformal ALD film as suggested by Kilpela et al. because Adomaitis et al. teaches a better way to control the gas and thus forming a more uniform film deposition.
